

**Course Assignments
for**

**Graph Drawing
DA4124 – Fall 08**

1st assignment

Deadline for this assignment is Nov 25, 2008.

Task 1 *Graph example (no group work)*

Draw the following graph given by the adjacency matrix

$$\begin{pmatrix} 0 & 1 & 0 & 1 & 0 & 0 \\ 0 & 0 & 0 & 1 & 0 & 0 \\ 0 & 1 & 0 & 0 & 0 & 1 \\ 0 & 0 & 1 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 & 0 & 0 \\ 0 & 1 & 0 & 1 & 0 & 0 \end{pmatrix}$$

by using your creativity and hands. Answer the following questions:

1. Is the graph directed or undirected?
2. Does it have cycles? If yes, where?
3. Is this graph simple?
4. What is the maximal degree of a node in the graph? In case the graph is directed, distinguish between indegree and outdegree.

Task 2 *Graph editors and specification languages (no group work)*

Install the graph editor GDE. You will find a URL for the download on the course web page. Produce a nice drawing of the graph from Task 1 with the help of GDE. To do that you must convert this adjacency matrix to a GML-file, load it into GDE, and choose a suitable layout algorithm. A URL to the specification language GML is also given on the course web page.

Task 3 *Layout of selected graphs (no group work)*

Download the following ZIP-file with five different graphs from

<http://cs.msi.vxu.se/isovis/courses/fall08/da4124/assignments/graphs-GML.zip>

and draw them with GDE as good and nice as possible! Test all algorithms and available options of this tool to get the best result. Why do you think that your result is nice and the best? Please, justify your thoughts!

Please prepare a short presentation (PowerPoint, Latex, PDF, ...) on/with your results and send it to Andreas Kerren via email by the given deadline! You will present it during the first exercise.
